

ANIMAL

1-2-3

The aquarium is a great place to practice your 1-2-3s. Animals have different numbers of body parts - some have 1 foot, some have 2 eyes, some have 5 legs. Can you find an aquarium animal with body parts for each number 1 through 10 (hint: you can count fins, feet, gills, eyes, spots, legs, flippers or anything)

Example: A seastar has 5 legs
